# "Software engineering project"

# Work flow:

- We have done everything together through online meetings.
- First, we have met a lot of problem for using git hub

But we first tried to learn how to deal with it before doing the project.

- Second, dealing with Flask doing sds , srs diagrams was difficult for us to handle at the beginning but after studying and learning how to deal with it we started doing the project
- Finally, deploying and analyzing was so difficult for us.
- Dealing with SDS and SRS at the beginning of the phases was not perfect but each phase we improve everything
